DNF:  $\overline{abcde} + \overline{abc}\overline{d} + \overline{abc}\overline{de} + \overline{ab}\overline{cde} + \overline{ab}\overline{cd}\overline{e} + \overline{ab}\overline{c}\overline{de} + \overline{abc}\overline{d}\overline{e}$

KNF:  $(a + b + \overline{c} + d + \overline{e}) \cdot (\overline{a} + b + \overline{c} + d + \overline{e}) \cdot (\overline{a} + b + c + d + \overline{e}) \cdot (\overline{a} + \overline{b} + \overline{c} + d + \overline{e}) \cdot (\overline{a} + \overline{b} + c + d + \overline{e}) \cdot (a + \overline{b} + c + d + \overline{e}) \cdot (\overline{a} + \overline{b} + \overline{c} + \overline{d} + \overline{e}) \cdot (\overline{a} + \overline{b} + c + \overline{d} + \overline{e}) \cdot (\overline{a} + b + \overline{c} + \overline{d} + \overline{e}) \cdot (\overline{a} + b + c + \overline{d} + \overline{e})$

Primimplikanten:  $\overline{e}, ad, \overline{abc}, \overline{abc}$

Primimplikate:  $\overline{a}, b + \overline{c} + d, \overline{b} + c + d$

Terme können durch Klicken fixiert werden, so dass keine anderen Terme mehr gezeigt werden. Ein erneutes Klicken reverteert diese Fixierung.

DMF:  $\overline{ad} + \overline{abc} + \overline{abc}$

KMF:  $(\overline{a}) \cdot (b + \overline{c} + d) \cdot (\overline{b} + c + d)$
